REPLICATION FILES FOR «**THE IMPACT OF STATE TELEVISION ON VOTER TURNOUT**», TO BE PUBLISHED BY *THE BRITISH JOURNAL OF POLITICAL SCIENCE*

The replication files consist of two datasets and corresponding STATA do-files. Please note the following:

1. The data used in the current microanalysis are based on the National Election Surveys of 1965, 1969, and 1973. The Institute of Social Research (ISF) was responsible for the original studies, and data was made available by the NSD (Norwegian Center for Research Data). Neither ISF nor NSD are responsible for the analyses/interpretations of the data presented here.
2. Some of the data used in the municipality-level analyses are taken from NSD's local government database ("*Kommunedatabasen*"). The NSD is not responsible for the analysis presented here or the interpretation offered in the BJPS-paper.
3. Note the municipality identification has been anonymized to avoid identification of individual respondents.
4. Most of the analyses generate Word-files that are produced by the `outreg2` facility in STATA. These tables can be compared with those presented in the paper. The graphs are directly comparable to those in the paper. In a few cases, the results are only generated in the STATA output window.

Replication files:

- The folder `AggregateData` includes files necessary to reproduce the results based on municipality-level data.
- The folder `MicroData` comprises files required to reproduce results based on survey data.
