Bergen 1978

## TABLE OF CONTENTS

	PAGE
ACKNOWLEDGMENTS	ii
CHAPTER	
1. INTRODUCTION	1
1.1 Background	1
1.2 Thesis objectives	3
1.3 Methodology	4
2. A FRAMEWORK FOR SENSITIVITY ANALYSIS	6
2.1 The concepts of model and data	6
2.2 Sensitivity analysis	11
2.2.1 A definition	11
2.2.2 Analytical versus numerical sensitivity analysis	13
2.3 Model sensitivity	15
2.3.1 Measuring the consequences of model use	15
2.3.2 Locating a model error	21
2.3.3 Problems of implementation	22
2.3.4 Model sensitivity without a complete model	23
2.4 Data sensitivity	26
2.4.1 The data error	26
2.4.2 Redefinition of the data error	28
2.4.3 Open or closed loop sensitivity	31
2.4.4 Types of error evaluators	33
2.4.5 Decision significance	40
2.4.6 Partial elasticities and project properties	44
2.4.7 Incorporating the probability of forecasting errors	45
2.4.8 Data sensitivity in the decision analysis cycle	48
2.4.9 Simultaneous data errors	52
2.4.10 Partial elasticities and arbitrarily large misestimations	53
2.5 Simultaneous model and data errors	57
2.6 Summary	58
Appendix 2.1: Mathematical derivations	60

CHAPTER	PAGE
3. ON THE DATA SENSITIVITY OF THE INTERNAL RATE OF RETURN MODEL	61
3.1 The internal rate of return model	61
3.2 Opportunity costs of misestimation	63
3.3 Previous research	66
3.4 Projects with cashflows following a life-cycle pattern	69
3.5 Properties of the life-cycle function (LCF)	72
3.6 Life-cycle projects and misestimated internal rates of return	77
3.7 Simulation study	84
3.7.1 The simulated projects	85
3.7.2 Average and extreme elasticity values	89
3.7.3 Comparisons between elasticities	92
3.7.4 Sensitivity and profitability	94
3.8 Arbitrarily large and simultaneous data errors	95
3.8.1 Analytical discussion	95
3.8.2 Results from simulation	97
3.9 Some additional issues	103
3.9.1 From project characteristics to the parameters of the LCF	103
3.9.2 Shape errors	107
3.10 Summary	111
Appendix 3.1: Mathematical derivations	114
4. THE USE OF MODELS AND DATA IN CAPITAL BUDGETING: AN EXPLORATIVE APPROACH	120
4.1 An evaluation of related work	121
4.2 Methodological issues	124
4.3 Operationalizing model and data activities (MDA)	128
4.3.1 Decentralized planning of capital budgeting projects	128
4.3.2 Model activities (MA)	130
4.3.3 Data activities (DA)	140
4.4 Some hypotheses for explaining model and data activities	149
4.4.1 The influence of interest groups	152
4.4.2 The effects of learning	157
4.4.3 MDA and decision errors	162
4.4.4 The firm's market power	166
4.5 Summary	172
Appendix 4.1: The full hypothesis system	175
